

How do you spot an outbreak on your campus **before** it spreads?

WITH AN INTEGRATED THERMAL IMAGING SOLUTION THAT HELPS YOU STAY **AHEAD OF THE SPREAD.**

Our technology can help identify a potential health threat before it spreads without sacrificing privacy or freedom of movement. We'll show you how.

Get your free “How to Return to Campus Safely” Plan at www.dlt.com/safetyplan

WHAT WILL HAPPEN THIS FALL WHEN STUDENTS RETURN TO CAMPUS?

Life is returning to normal across our schools, but we still need to prepare for future outbreaks. If we don't, campuses may shut down – and learning will once again grind to a halt. While administrators are taking the necessary precautions, many solutions are invasive, restrictive, and do not scale with bigger student bodies or campuses. Cumbersome scanners at entrances/exits and forehead temperature thermometers create bottlenecks, and they aren't always reliable. Plus, if you do identify a student or teacher with a high temperature, how do you handle the situation without creating attention?

After the last 18 months, it's stressful (and even a little scary) to think about returning our students, teachers, and faculty to in-person learning. But what if you could get ahead of the spread by proactively scanning for temperature spikes – a telltale sign of infection – and do it privately and accurately?

HOW OUR THERMAL IMAGING SOLUTION CAN HELP

✓ **Maintain freedom of movement**

Our thermal imaging technology can spot temperature spikes in a crowd without creating inconvenient bottlenecks.

✓ **Protect privacy**

By deploying our thermal imaging solution near entranceways, you can quickly and easily scan a crowd for potential health risks without compromising privacy or mobility.

✓ **Mesh data with your Student Information Systems**

By integrating our solution with your existing student information systems and IT infrastructure, you can pass information across your network and execute a rapid risk management response plan before a potential outbreak becomes an issue.

HERE'S HOW TO GET STARTED

We know how to integrate technology solutions to solve exactly these kinds of challenges – and as the global leader in technology distribution, we know how to get these solutions into your hands quickly.

- 1) Go to www.dlt.com/safetyplan
- 2) Enter your campus details so we can build a custom proposal for your school.
- 3) Get a **free plan*** for your campus that works with your current IT infrastructure and helps you and your students return safely.
